

Before you begin...

1. Check pH: pH should be within range of 7.4-7.8.
2. Check Balancers: Alkalinity should be within the range 80-120ppm. Calcium hardness should be within range of 200-250ppm.
3. Add ___lb. powdered shock (1lb per 10,000 gallons)
4. After 72 hours, add 1lb Formula "O" directly to pool.

Maintenance!

- If filter is 2-speed, run continuously 24 hours a day.
 - If filter is single speed, run minimum 8-10 hours a day.
1. Add ___lb. Formula "O" (1lb per 10,000 gallons)
 2. Add ___lb. Powdered Shock (1lb. per 10,000 gallons)
 3. Add ___lb. Clear N Silky (1lb per 10,000 gallons) THIS IS OPTIONAL

Bacteria Tests

If bacteria test reveals high levels, add 2nd dose of Formula "O" directly to the pool while the filter is running.

Bring in a water sample once per month throughout the pool season for a complete water lab test.
